Physical Review Letters • Physical Review • Reviews of Modern Physics • Physica

Dear Sir or Madam,

We are pleased to inform you that the Letter

Structural landscapes in geometrically frustrated
smectics

Jingmin Xia, Scott MacLachlan, Timothy J. Atherton, and Patrick E.
Farrell
Phys. Rev. Lett. **126**, 177801 (2021)

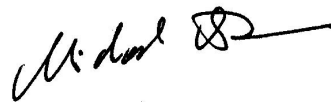

Published 27 April 2021

has been highlighted by the editors as an Editors' Suggestion. Publication of a Letter is already a considerable achievement, as *Physical Review Letters* accepts fewer than 1/4 of submissions, and is ranked first among physics and mathematics journals by the Google Scholar five-year h-index. A highlighted Letter has additional significance, because only about one Letter in seven is highlighted as a Suggestion due to its particular importance, innovation, and broad appeal. Suggestions are downloaded more than twice as often as the average Letter, and receive substantially more press coverage. Suggestions are cited at roughly twice the rate of nonhighlighted Letters. More information about our journal and its history can be found on our webpage prl.aps.org.

Yours sincerely,

Hugues Chaté
Editor
